

1st Mediterranean Forum for PhD Students and Young Researchers

Designing Sustainable Agricultural and Food Production Systems
under Global Changes in the Mediterranean
18-19 July 2016, Montpellier, France

Social Life Cycle Assessment – its consistency with fisheries' sustainability analysis

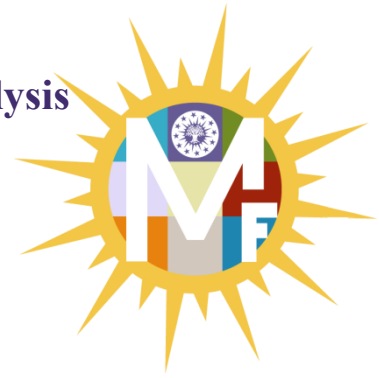

Yazdan Soltanpour^{*1}, Martine Padilla², Iuri Peri³

¹ PhD student at Department of Agriculture, Food and Environment, University of Catania-Italy

² Associate professor-researcher at CIHEAM-IAM Montpellier- France

³ Professor at Department of Agriculture, Food and Environment, University of Catania-Italy

* Speaker and corresponding author: yazdan.soltanpour@gmail.com

Social

Two definitions

as in welfare economics

employment, remuneration,
health, utility,

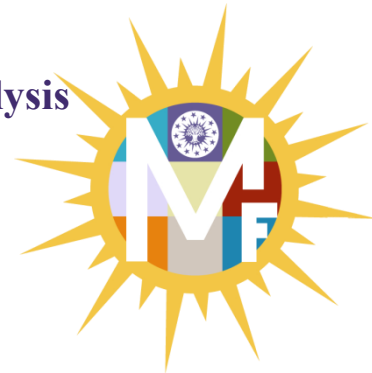

An accounting that encompasses
the entire social economy

as in sociology

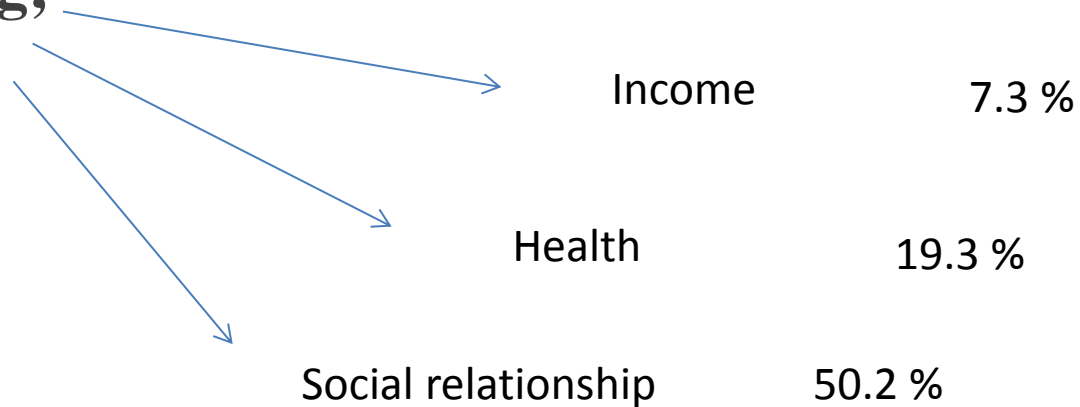

equity, collaboration, relations,
conflicts, obligations, ...

The interactions of people and
their organizations

Can we cover all these?

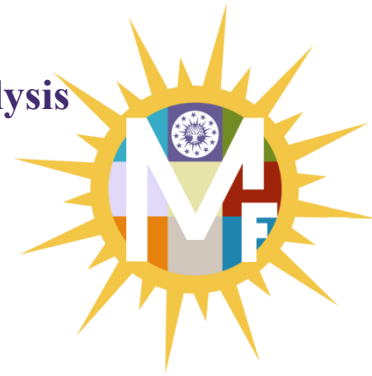

Well-being;

University of Bath, UK

Lamu & Olsen, 2016

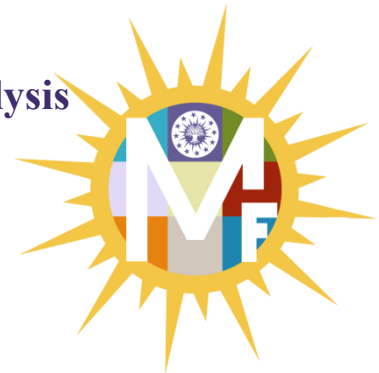

Social Life Cycle Assessment

doesn't work

Why?

- The impact categories
- Quantitative data
- The majority use average data

How to make it work?

- **Use Consequences of actions**
- **Study the relations between the fishermen**
- **Use participatory tools to collect data**
